NEW YORK REPUBLICANS.

Surprising changes in the procedure of sending delegations to the national convention were adumbrated by the Republicans of the state of New York in convention assembled yesterday, by a majority vote the body went on record in favor of reconstituting the present methods and rules the principal changes favored being that by which the strongest Republican states will be given the largest voice in the selection of the Republican candidate for president.

The Republicans of the state of New York furthermore urge a national convention at the earliest possible date to effect the changes, advocated by the Empire State Republicans.

The Republican party never needs more than one consecutive victory.

The one received at the last election has had its usual salutary and wholesome effect. With the initiative assumed by the great state of New York, there is little doubt that the rank and file and the leaders in the other states will fall in line for the house-cleaning, the clean slate and the long, strong pull all together for victory in 1912. Such action means inevitably the return of the discredited and the so-called progressives to the fold and the injection of real progressivism into the G. O. P.

We believe the action of New York deeply significant. Present conditions in New York certainly warrant the assertion that the people there will soon have had enough of disastrous Democracy; conditions in the nation will inevitably shape themselves toward a strong reaction; what is becoming of the Bull Moosers; and there is ground for the belief that there will be more than one kind of revolutionizing in the year 1912.

THE OPEN WINDOW.

A medical inspector of the Philadelphia public schools, with the co-operation of teachers and parents, recently made an experiment to determine the value of cold fresh air in school rooms, which was reported in the American Journal of Public Health. The windows were opened at top and bottom, and kept open throughout the winter. The room was shut off from the heating plant of the building except on occasional days when the temperature fell below 45 degrees; but the children, of course, wore extra wraps and had frequent drills and exercises.

Week by week during the fall and winter and spring this physician weighed and examined the pupils, watched their study and their play and compared their progress in health and scholarship with that of pupils in another room of the same building. In that other room the pupils were of the same grade, and of about the same number, but the room was heated and ventilated according to the usual methods. The pupils in both rooms were normal, healthy children from the same kind of homes, so that the test was as fair, accurate and searching as possible.

At the end, the inspector found that the pupils in the open-window room had gained in weight on an average more than twice as much as those in the warm air room. The pupils in the open room kept wholly free from colds and were much more regular in attendance than the others. They were also more alert, free from day-dreaming, quicker to learn, needed less review work and were better behaved. In health and happiness, in development, both of mind and body, the children of the room with open windows had a clear advantage over the others.

In these days the gospel of sunshine and pure air ought to need little preaching. Most of us accept it, but we do not always practice the doctrine that we believe in and preach. This Philadelphia experiment lay not in giving the open-air treatment to sick children—which everyone approves; it lay in giving to well children some of the good things that nature intended that they should enjoy, and in demonstrating to the school officials and parents the advantages of lower schoolroom temperatures.

As a result, the school board, regarding their views, has authorized the establishment of open-window classes in several other Philadelphia schools.

NO CRIMINAL TYPE.

Now is the Lomaxian theory that he writes down into the air. Dr. Murray, during an English physician, has published a book to show that there is nothing to it. According to his investigations there is no proof to show that criminality is a specific condition of mind which finds manifestation in abnormal features and strangely shaped heads.

The Lomaxian theory has been accepted as scientific gospel, but after twelve years of study of English prisoners during the vacation period the Village Improvement association offered cash and honor prizes for the best exhibits of vegetables and flowers planted and cultivated exclusively by the children. A considerable majority of the pupils entered the competition, and their summer instead of all play, has been spent in profitable out-door education. The entire community is interested in the experiment and looking forward to the prize exhibition to take place on Saturday. Contests along similar lines have been held this year in several Jersey towns with substantial benefit to the young people.

FINISH IT UP.

The chairman of the county road board says that the new road built by 700 or more city and county boasters a couple of weeks ago is turning into dust and blowing away.

It is recommended that the chairman of the aforementioned road board and the other members get busy. We believe the county owns a grader; why not use it?

The county board at small expense and with the aid of a little elbow grease can put the finishing touches on the road built on Good Roads day and can maintain it. No road on earth can be expected to maintain itself. If a road becomes dusty there is only one remedy, unless you have oil, and that is water. The heavy rains which have occurred recently ought to supply a modicum of moisture; and the county sprinkling wagon might be used most advantageously to reinforce the supply. Let us have that road maintained, now that it is built.

PERFECTO ARMijo.

In the death of Perfecto Armijo Albuquerque and Bernalillo county lose one of their most picturesque, useful and respected citizens. He was another of the men who linked the picturesque and strenuous early New Mexico days with the bustling commercial present. His death will be deplored by all who became conversant with his sterling qualities of mind and heart and all who admire the old-fashioned western type of manhood.

The Americans who went to Mexico to help invest a billion dollars are now described as "desirous" and are offered a charity ticket home. This is the most expensive form of blue sky yet discovered.

Senator Simmons says he thinks the new tariff will stimulate trade. Practical business men hope that it will not be an injury. The idea of replacing prosperity with something better did not originate with them.

An oily rag or oily waste never should be thrown into a rubbish heap. Many fires start in closets from such rags after use in oiling floors or polishing furniture; and factory fires occurring constantly from spontaneous ignition of turpentine and unseed oil on rags and waste. There are not many men who give the same thought to this danger in their homes that they give to it in their factories, where metal waste cuts with self-closing covers are generally provided.

At the time of spring renovations, however, it is well to keep an eye upon the domestic establishment with this hazard in mind, as servants are generally quite irresponsible. Products of petroleum such as kerosene, gasoline and naphtha, although they do not ignite spontaneously, have a hazard of their own, and rags soaked in them should be carefully looked after. A house rule should be made that all greasy or oily rags be burned without delay.

In the developments of rapid transit along the lines of trolley cars and automobiles, the problem of flying dust has been immensely intensified and confronts all lovers of cleanliness. Ordinary broom sweeping simply stirs it up to settle again on floors and furniture. The vacuum cleaner has not yet developed to the point at which its constant use is commercially expedient. An endless procession of floor oils and sweeping compounds has therefore come upon the market, some of which are not hazardous, but others of which are already demonstrating their ability to burn the buildings in which they are used.

Prof. John H. Bryan, principal of the ward schools of Marion, Ind., who evidently looks after the physical as well as the mental welfare of his pupils, stated at a recent meeting of school superintendents that twice recently he had found mops used by the janitor in oiling the floor burned to ashes, it being evident that the building each time narrowly escaped being fired. To prove the truth of this, Prof. Bryan saturated several mops with the oil and hung them where there were no intend-

ed incendiaries. A shop saturated with oil at 4 p. m. was noted to be very warm at 1 a. m., and in one instance Prof. Bryan watched a mop burn right into flames.

ENCOURAGING THE YOUNG-STEERS.

As illustrating what rural communities are doing for the encouragement of their young people the effort of Cedar Grove, N. J., is worth noting. To keep the boys and girls from idleness during the vacation period the Village Improvement association offered cash and honor prizes for the best exhibits of vegetables and flowers planted and cultivated exclusively by the children. A considerable majority of the pupils entered the competition, and their summer instead of all play, has been spent in profitable out-door education.

The Lomaxian theory has been accepted as scientific gospel, but after twelve years of study of English prisoners during the vacation period the Village Improvement association offered cash and honor prizes for the best exhibits of vegetables and flowers planted and cultivated exclusively by the children. A considerable majority of the pupils entered the competition, and their summer instead of all play, has been spent in profitable out-door education.
